A: identical GRUs, state feedback x output projection

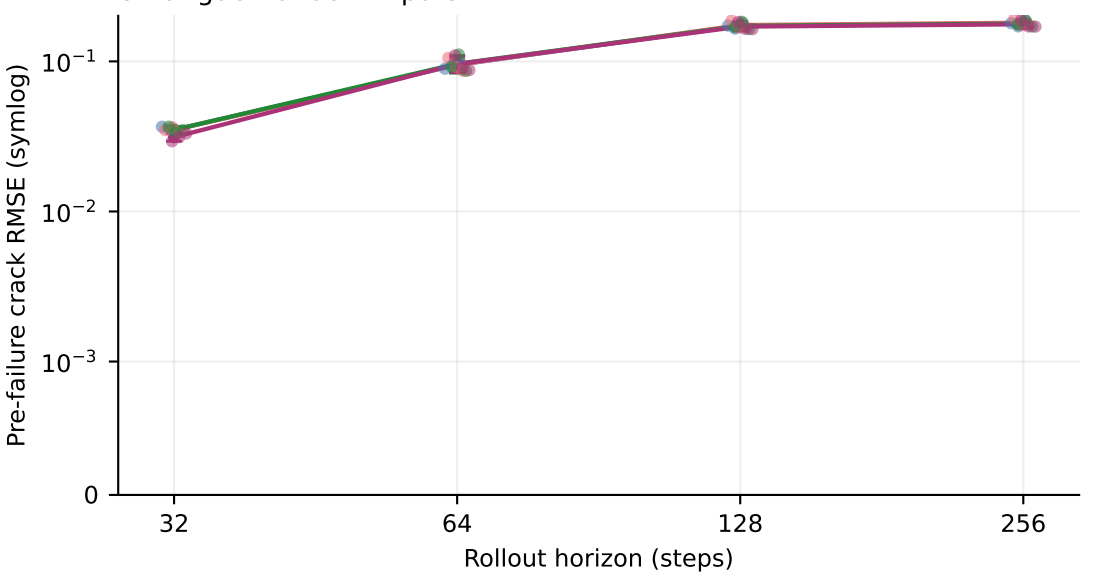

a Thermal: random inputs

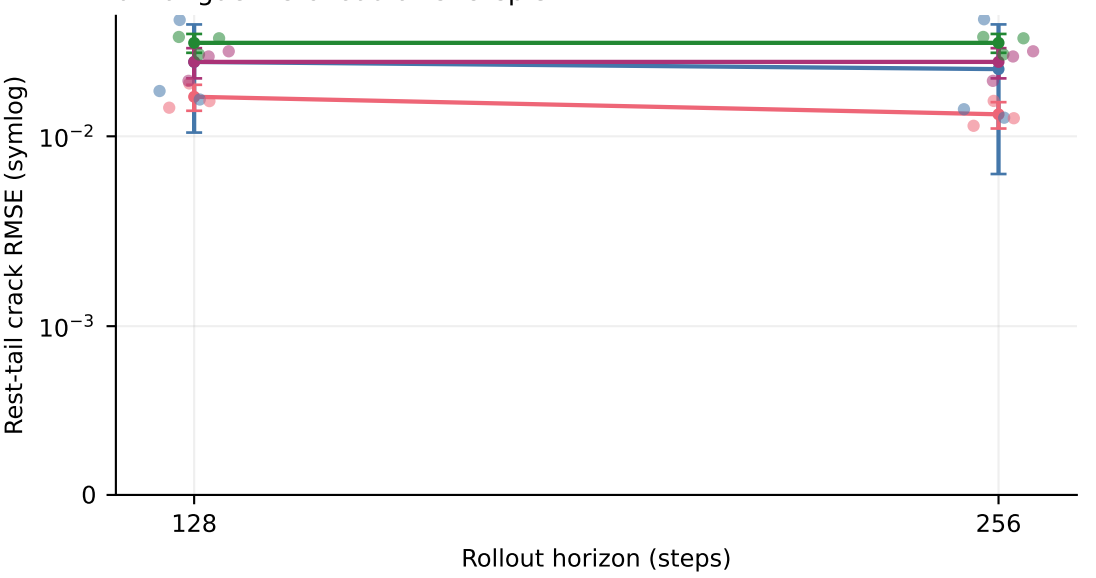

b Thermal: zero power after step 32

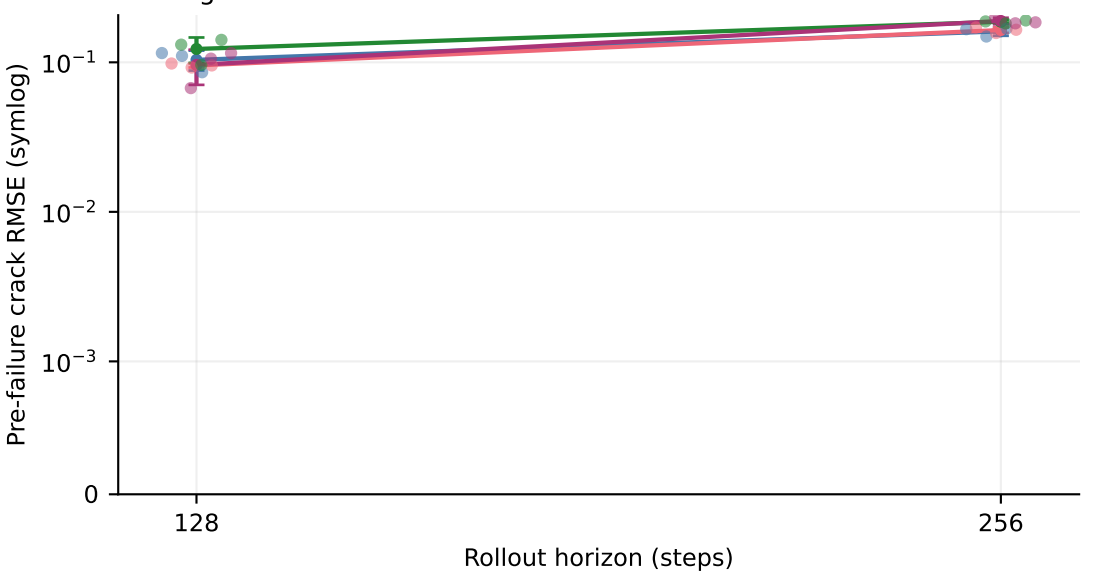

c Fatigue: random inputs

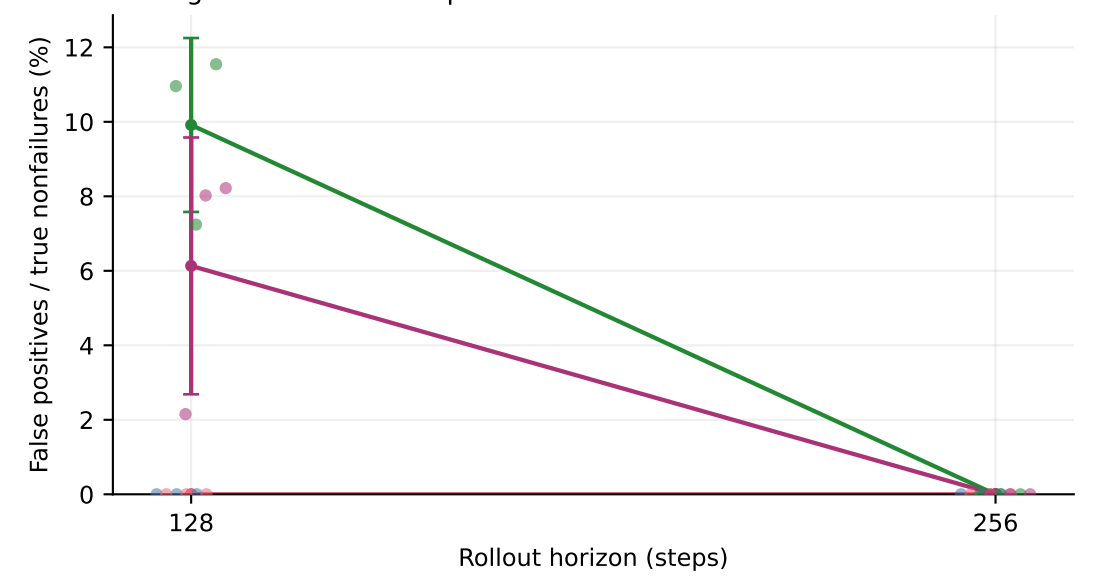

d Fatigue: zero load after step 32

e Fatigue: sustained low load

f Fatigue: low-load false positives

GRU: neither
GRU: feedback
GRU: projection
GRU: feedback + projection

Points: 3 seeds; lines and bars: mean +/- sample SD. No mean is plotted for incomplete seed sets.
Train horizon = 32; tests = 512 fixed episodes. SD bars below zero are clipped to the nonnegative domain; statistics unchanged.
